Q.2 Create a new user account on your Windows system and set a strong password that meets at least 3 out of 4 complexity requirements (uppercase, lowercase, number, special character).

ANS :

1. Press **Win + I** to open **Settings**.
2. Go to **Accounts** → **Other users** (or **Family & other users**).
3. Click **Add account** (under *Add other user*).
4. Select **"I don't have this person's sign-in information"**, then choose **"Add a user without a Microsoft account"**.
5. Enter the username (e.g., CyberStudent).
6. Enter a strong password that meets complexity rules (e.g., Secur3Pass#2026) containing:
 - **Uppercase:** S, P
 - **Lowercase:** ecur, ass
 - **Numbers:** 3, 2026
 - **Special Character:** #
7. Complete the required security questions and click **Next**.

Q.3 Disable file sharing for the Public folder in Windows and verify that it is no longer accessible from another device on the same network. Hint: Use the 'Advanced sharing settings' in the Network and Sharing Center.

ANS : Here are the steps to disable Public folder sharing in Windows and verify that it is turned off across your local network:

Step 1: Disable Public Folder Sharing via Advanced Sharing Settings

1. Press Win + R, type control, and press **Enter** to open the classic **Control Panel**.
2. Click **Network and Internet** → **Network and Sharing Center**.
3. In the left panel, click **Change advanced sharing settings**.
4. Expand the **All Networks** section.
5. Under **Public folder sharing**, select **Turn off Public folder sharing** (*people logged on to this computer can still access these folders*).
6. Under **Password protected sharing**, ensure **Turn on password protected sharing** is selected.
7. Click **Save changes** (confirm the UAC prompt if required).

Step 2: Disable Explicit Folder Sharing (Double-Check)

1. Open **File Explorer** and navigate to C:\Users.
2. Right-click the **Public** folder and select **Properties**.
3. Go to the **Sharing** tab and click **Advanced Sharing...**
4. Uncheck **Share this folder**.
5. Click **Apply** and then **OK**.

Step 3: Verify It Is No Longer Accessible from Another Device

1. Connect a second device (laptop, mobile phone, or virtual machine) to the **same local network/Wi-Fi**.
2. Determine your host computer's IP address:
 - On your host PC, open **Command Prompt** and type ipconfig. Note your **IPv4 Address** (e.g., 192.168.1.50).
3. On the second device:
 - **From a Windows device:** Press Win + R, type \\192.168.1.50 (replace with your host IP), and press **Enter**.

ASSIGNMENT : 8 – WINDOWS SECURITY

GUIDED BY : VIPUL MISTRI

- **From Linux/macOS/Mobile:** Open a file browser/SMB client and connect to smb://192.168.1.50.
- 4. **Expected Result:** The Public share folder will no longer appear in the shared list, or attempting to access \\192.168.1.50\Public will display an "**Access Denied**" or "**Network Path Not Found**" error.

Q.4 Configure the Windows Firewall to block all incoming connections for a specific app of your choice (for example, Spotify or Chrome) and test that the app cannot access the internet. Hint: Go to Windows Defender Firewall > Allow an app or feature through Windows Defender Firewall, and adjust the settings.

ANS :

Here is how to configure Windows Defender Firewall to block all incoming connections for a specific application (using Google Chrome as an example) and test the block:

Step 1: Block Incoming Connections via Advanced Settings (Recommended & Most Reliable)

1. Press Win + R, type wf.msc, and press **Enter** to open **Windows Defender Firewall with Advanced Security**.
2. In the left panel, click **Inbound Rules**.
3. In the right panel, click **New Rule...**
4. Choose **Program** as the Rule Type and click **Next**.
5. Select **This program path**, click **Browse...**, and select the application's executable:
 - *Example (Chrome):* C:\Program Files\Google\Chrome\Application\chrome.exe

ASSIGNMENT : 8 – WINDOWS SECURITY

GUIDED BY : VIPUL MISTRI

- *Example (Spotify):*
C:\Users\<YourUsername>\AppData\Roaming\Spotify\Spotify.exe

6. Click **Next**.
7. Select **Block the connection** and click **Next**.
8. Keep all profiles checked (**Domain**, **Private**, **Public**) and click **Next**.
9. Name the rule (e.g., Block Chrome Inbound) and click **Finish**.

Step 2: Uncheck App Permissions in Basic Firewall Settings (Alternative Method)

1. Press Win + R, type control firewall.cpl, and press **Enter**.
2. Click **Allow an app or feature through Windows Defender Firewall** in the left menu.
3. Click **Change settings** (requires administrator permissions).
4. Scroll down to find your application (e.g., **Google Chrome** or **Spotify**).
5. Uncheck both the **Private** and **Public** checkboxes next to it.
6. Click **OK**.
