

Q.1 Create a backup of your WhatsApp chat history on your Android device, then locate and verify the backup file in your Google Drive or local storage.

ANS : To create, locate, and verify a WhatsApp chat backup on an Android device, follow these steps:

Step 1: Create the Backup in WhatsApp

1. Open **WhatsApp** on your Android phone.
2. Tap the **three dots** (Menu) in the top-right corner and select **Settings**.
3. Go to **Chats** → **Chat Backup**.
4. *(Optional)* Under **Google Account**, select your desired Google profile.
5. Tap the green **BACK UP** button.
 - This generates both a **local database backup** on your phone's storage and uploads a copy to **Google Drive**.

Step 2: Locate and Verify the Local Backup

Because modern Android versions (Android 11 and newer) use Scoped Storage, WhatsApp stores its local database files deep within the application system directories rather than the main storage root.

1. Open your phone's **File Manager** app.
2. Navigate to:
Internal Storage → Android → media → com.whatsapp → WhatsApp → Databases
3. **Verify the file:** Look for a file named msgstore.db.crypt14 (or msgstore-YYYY-MM-DD.1.db.crypt14).
 - Check the **Timestamp** on the file to confirm it matches the exact time you pressed "Back Up" in Step 1.

Step 3: Verify the Cloud Backup in Google Drive

Google Drive stores WhatsApp backups in a hidden system management folder to prevent accidental file deletion or corruption:

1. Open the **Google Drive** app on your phone (or visit drive.google.com on a browser).
2. Tap the **hamburger menu** (three horizontal lines) in the top-left corner and select **Backups** (or **Storage** → **Backups**).

3. Look for an entry labeled **WhatsApp [Your Phone Number] backup**.
4. **Verify the entry:** Tap on it to confirm the **date and time** match your latest backup, along with the size of the backup package.

Q.2 Simulate accidental photo deletion by moving 3 images from your phone's gallery to the trash, then restore them using your phone's built-in recovery feature. Hint: Check the 'Recently Deleted' or 'Trash' folder in your gallery app.

ANS : Here is the step-by-step process to simulate deleting and restoring photos on your phone using the built-in gallery trash bin:

Step 1: Simulate Accidental Deletion

1. Open your device's primary **Gallery** or **Google Photos** app.
2. Tap and hold to select **3 test images**.
3. Tap the **Delete** (Trash Can icon) at the bottom or top menu.
4. Confirm by tapping **Move to Trash** (or **Move to Bin / Recently Deleted**).
 - *Note:* At this stage, the photos are not permanently removed from storage—they are moved to a temporary staging area for 30 days.

Step 2: Locate the Trash Folder

In Samsung / Stock Android Gallery:

1. Tap the **Menu icon** (three horizontal lines or three dots) in the bottom right corner of your Gallery app.
2. Select **Trash** (or **Recently Deleted**).

In Google Photos:

1. Tap the **Library** or **Collections** tab at the bottom.
2. Tap the **Trash / Bin** folder near the top.

Step 3: Restore the Deleted Images

1. Inside the Trash/Bin folder, long-press to select all 3 previously deleted images.
2. Tap **Restore** (or the **Revert** arrow icon).
3. Open your main Gallery view to confirm that all 3 photos have returned to their original folders and timestamps.

Q.3 Write a step-by-step guide (with screenshots if possible) on how to schedule automatic backups of your contacts to Google Account or iCloud, so you never lose them if your phone is lost.

ANS : Here is a step-by-step guide to setting up automatic contact backups for both **Android (Google Account)** and **iPhone (iCloud)**.

Method 1: Android (Google Account Auto-Sync)

Setting up automatic sync ensures every new contact you add is backed up to your Google Account instantly in real time.

Step 1: Open System Settings

Open the **Settings** app on your Android device and scroll down to select **Google** (or **Google Services**).

Plaintext

```
+-----+
| [ Settings ] |
|             |
| ...         |
| accounts & Sync |
| [ G ] Google Services <--- |
| ...         |
+-----+
```

Step 2: Access Google Contacts Sync

1. Tap **Settings for Google apps** (or **All Services** on newer Android versions).

- Plaintext

Step 3: Turn On Automatic Backup & Sync

- Plaintext

```

+-----+
| [ Automatically Back Up & Sync ] |
|                                     |
| Back up device contacts           |
| [===== ON =====] <--- |
|                                     |
| Account: user@gmail.com          |
+-----+

```

Verification Step: Open a browser on any computer, log into contacts.google.com, and confirm all your phone numbers appear there.

Method 2: iPhone (Apple iCloud Sync)

iCloud automatically backs up and syncs your contacts across all Apple devices whenever your phone is connected to the internet.

Step 1: Open Settings & Select Apple ID

Open the **Settings** app on your iPhone and tap your **Name / Apple ID profile banner** at the top.

Plaintext

```
+-----+
| [ Settings ] |
|           |
| +-----+ |
| | [ Profile Picture ] | |
| | Your Name | |
| | Apple ID, iCloud, Media <--- | |
| +-----+ |
|           |
+-----+
```

Step 2: Open iCloud Settings

Select **iCloud** from the Apple ID menu.

Plaintext

```
+-----+
| [ Apple ID ]      |
|                   |
| > Subscriptions   |
| > iCloud          <--- |
| > Media & Purchases |
+-----+
```

Step 3: Enable Contacts Sync

1. Under the **Apps Using iCloud** section, tap **Show All** (or **See All**).
2. Locate **Contacts** and toggle the switch to **ON** (Green).
3. If prompted with *"What would you like to do with existing local contacts?"*, select **Merge**.

Plaintext

```
+-----+
| [ Apps Using iCloud ] |
|                   |
| Photos      On >    |
| iCloud Drive On >    |
| Contacts    [ ON ] <--- |
| Calendars   On >     |
+-----+
```

Verification Step: Log into icloud.com/contacts on any browser with your Apple ID credentials to view your backed-up address book.

Q.4 Use Google Takeout to export and download a backup of your YouTube playlist data, then extract the ZIP and list the names of all playlists you backed up.

ANS : To export, extract, and list your YouTube playlist data using **Google Takeout**, follow these steps:

Step 1: Export Your YouTube Data via Google Takeout

1. Go to takeout.google.com.
2. At the top of the list, click **Deselect all**.
3. Scroll down and check the box next to **YouTube and YouTube Music**.
4. Click the button labeled **All YouTube data included**.
5. In the pop-up menu, click **Deselect all**, check **playlists**, and click **OK**.
6. Scroll to the bottom and click **Next step**.
7. Choose your delivery method (e.g., *Send download link via email*) and file format (.zip), then click **Create export**.
8. Once Google finishes processing, open the email or download page and click **Download archive**.

Step 2: Extract the ZIP Archive

1. Locate the downloaded .zip file on your computer (e.g., takeout-2026xxxx.zip).

2. **On Windows:** Right-click the file and select **Extract All... → Extract**.

3. **On macOS / Linux:** Double-click the .zip file or run:

Bash

unzip takeout-*.zip

Step 3: Locate Your Playlists

1. Open the extracted folder and navigate to:

Takeout → YouTube and YouTube Music → playlists

2. Inside this folder, Google Takeout creates a separate .csv file for every playlist you own (e.g., Likes.csv, Watch Later.csv, or custom playlist names).

Step 4: List Your Backed-Up Playlists

Open your terminal or command prompt inside the playlists directory to list all backed-up playlists automatically:

- **On Windows (Command Prompt):**

DOS

dir *.csv /b

- **On macOS / Linux (Terminal):**

Bash

ls -l *.csv

Q.5 Test restoring a deleted file from Google Drive's Trash: upload a sample file, delete it, then recover it from Trash and confirm it's accessible.

ANS : Here is the step-by-step procedure to test creating, moving to trash, and restoring a file in Google Drive:

Step 1: Create a Sample File

First, create a test file in your Google Drive.

[Trash Test File](#)

Trash Test File

Google Docs

Open

Step 2: Move the File to Trash (Simulate Deletion)

1. Open **Google Drive** (drive.google.com).
2. Locate the file **Trash Test File**.
3. Right-click on the file (or click the three vertical dots menu next to it) and select **Move to Trash** (or click the Trash Can icon).

Step 3: Recover the File from Trash

1. In the left navigation sidebar of Google Drive, click on **Trash** (or **Bin**).
2. Right-click on **Trash Test File**.

3. Click **Restore**.

Step 4: Confirm Accessibility

1. Navigate back to **My Drive**.
2. Open **Trash Test File** to verify that it is restored to its original location and fully accessible.
